## Projects:

### • Fitness tracker: [Link](#)

A simple fitness app using only HTML, CSS and JavaScript. It allows users to input the type of exercise and duration and it calculates the calories burned.

### • Library Management System: [Link](#)

Tech stack: Python, MySQL/SQLite

Description: System for managing a library's books, including features for borrowing, returning, and searching for books. You can add an admin panel to manage the catalog and issue history.
